

Protecting Your Home From Natural Weather Events

- **01.** Schedule a professional foundation inspection to identify cracks or other damage and help keep water out in the humid summer months.
- **02.** Add a dehumidifier in the basement or crawl space to reduce humidity, mold, mildew, and pests and prevent water intrusion throughout the year.
- **03.** Water lawns during dry conditions and maintain drainage systems to protect the home's foundation.
- **04.** Install interior drainage, a sump pump, and flood vents to protect against flooding.
- **05.** Conduct regular lawn maintenance, trim trees, and remove old or damaged trees to protect the home from storm damage.
- **06.** Insulate basement or crawl space from freezing winter temperatures to minimize burst pipes and lower heating bills.
